SUMMARY

BTech CSE graduate and Software Engineer Trainee at Cisco with strong expertise in Java, Spring Boot, and full-stack development. Experienced in building scalable REST APIs, deploying applications on AWS, and working with CI/CD workflows using Docker and Jenkins. Proficient in Data Structures & Algorithms and problem-solving. Passionate about backend systems, cloud technologies, and AI-integrated applications.

EDUCATION

BTech - CSE (AI & ML) **2020 - 2024**
CMR Institute of Technology, Hyderabad | CGPA - 8.73

EXPERIENCE

Software Engineer Trainee (Apprentice) **August 2025 – Present**
Cisco Systems, Inc. | Hyderabad - IN

- Built and deployed full-stack application using Java (Spring Boot) and Angular as part of a structured engineering apprenticeship.
- Developed REST APIs for backend services with MySQL integration.
- Worked with CI/CD workflows using Jenkins and Docker for application deployment.

Key Contributions:

- Designed and developed an AI-integrated calendar tool using Model Context Protocol (MCP) and Claude.
- Enabled LLM-driven task execution through structured tool invocation and response handling.
- Implemented serverless automation using AWS Lambda and SNS to trigger email notifications.
- Developed a Release Builder UI to convert unstructured release notes (text/CSV) into structured JSON format, improving documentation consistency.

SKILLS

- Languages:** Java, JavaScript, Python, SQL
- Frontend:** HTML5, CSS3, Angular
- Backend:** Spring Boot, REST APIs, Maven
- Cloud & DevOps:** AWS (EC2, Lambda, SNS, S3, IAM), Docker, Jenkins

PROJECTS

Movie Booking Application

Tech stack: Angular, Java, Spring Boot, REST APIs, MySQL, Docker, AWS EC2

- Developed a full-stack movie booking system with Angular frontend and Spring Boot backend.
- Designed REST APIs for user management and booking workflows.
- Integrated MySQL database for persistent storage.
- Containerized the application using Docker and deployed it on AWS EC2.

Real-Time Log Processing System (Kafka)

Tech stack: Apache Kafka, Kafka Streams, Spring Boot, Angular, WebSocket

- Built a real-time log monitoring system to stream transactional data from Kafka to a live dashboard.
- Used Kafka Streams to aggregate and compute service-level metrics for live visualization.
- Implemented filtering based on client and service ID to stream specific data to the UI.
- Gained hands-on experience with event-driven architecture and distributed systems.

MCP-based Calendar Tool

Tech stack: MCP, Claude desktop, Python

- Developed a calendar tool integrated with Claude using the Model Context Protocol (MCP).
- Enabled LLM-driven scheduling through structured tool invocation and response handling.
- Gained hands-on experience in AI tool integration and LLM orchestration workflows.

CERTIFICATIONS

- GitHub Copilot for Software development Using Python** – Cisco & Simplilearn, Feb 2026
- Java Full Stack Development Program** – Cisco & Simplilearn, Oct – Dec 2025
- AWS Cloud** - ICT Academy and Cognizant Foundation, Feb 2023
